QUANTA USER MANUAL

TRADER-HELP

QUANTA

A MetaTrader 5 Expert Advisor, created to fully automate seizing any financial opportunities. Through the use of the latest technological advancements, Quanta is able to trade on sentimental signals based on large amounts of the most relevant data. Quanta's artificial intelligence has one purpose - maximize returns and minimize any risk.

ARTIFICIAL INTELLIGENCE

A key for Quanta's high success includes its' main component - artificial intelligence. The Expert Advisor leverages on its' unique ability to process massive amounts of data, quickly, and learn from it. Artificial intelligence results in the robot's constant development of executing trades with higher prediction accuracy.

DATA RELEVANCY

The data used by Quanta is updated on a regular basis and is made available for individuals holding a product license ONLY. When a client purchases the Expert Advisor from Trader-Help, he/ she is registered in our database. A unique key number is generated for each client. Individual key number is checked each time Quanta requests for an update of the indicator data. In the event of failure, no indicator data is returned.

ACCOUNTABILITY

All trading involves risk. Trader-Help and any of its' internal stakeholders do not hold responsibility in the event of losses incurred. We have worked extremely hard to develop Quanta to be a reliable Expert Advisor, but trading involves speculation and predictions. In the event of profiting from the Expert Advisor, any wealth generated by your investment fully remains for you and vice-versa. You hold full responsibility for any losses incurred.

TRADING ZONE

For the time period, Quanta is fully functional with financial equity instruments, in the United States. The data used to guide the execution of trades is only relevant for stocks in the United States.

ALLOW WEB REQUESTS

You must explicitly allow web requests in the MetaTrader platform to <https://trader-help.com>.

Quanta is connected to Trader-Help, to access the relevant indicator data that it uses to execute trades on.

1. PRESS "TOOLS" IN THE MENU BAR

In the menubar of the Metatrader platform, press on tools and locate to options. If you'd rather use a keyboard shortcut to access options, press "Ctrl + O", on your keyboard.

2. CLICK ON "EXPERT ADVISORS" TAB

Make sure that "Allow automated trading" option is ticked. Ensure to also tick "Allow WebRequests for listed URL:" is ticked and add to the list "<https://trader-help.com>".
